skin

eyes

oral

See section 2.2

11.3: Symptoms of exposure

See section 4.2

11.4: Delayed and immediate effects of exposure

The most characteristic symptom of thallium exposure is alopecia (loss of hair). Cutaneous effects may include dry, scaly skin and impairment of nail growth often resulting in the appearance of crescent-shaped strips across fingernails and toenails (Mees' line). Acute poisoning also can affect the gastrointestinal tract, nervous system, skin, eyes, and cardiovascular system resulting in swelling of the feet and legs, arthralgia, vomiting, insomnia, hyperesthesia and paresthesia of the hands and feet, mental confusion, polyneuritis with severe pain in the legs and loins, partial paralysis of the legs, angina-like pains, nephritis, wasting and weakness, and lymphocytosis and eosinophilia. Chronic poisoning may result in central and peripheral nervous system abnormalities including ataxia, tremor, incoordination, paralysis of extremities, endocrine disorders, memory loss, and psychoses.

To the best of our knowledge the toxicological properties have not been thoroughly investigated.
